Re: Letter of Recommendation

Dear Mr. Morrissey:

I serve as the engineering committee chairman for the for Upper Oconee Basin Water Authority. Caldwell Electrical Contractors, Inc. (CEC) recently completed a variable frequency drive (VFD) upgrade at the Bear Creek Water Treatment Facility. The project involved many unforeseen issues, in which CEC worked diligently to correct. I observed CEC acting in an extremely professional manner in all my dealings, and believe them to be a credible, trustworthy organization.

Currently CEC is completing a generator installation project for at Galilee Pump Station for the Jackson County Water and Sewerage Authority. According to our construction inspector's report today, and his documented photos, the CEC crew discovered CMU blocks and rubble underground immediately in the path of the proposed electrical conduit. The crew worked diligently, digging the trench entirely by hand, without complaint. They also spoke very highly of CEC and its leadership communicating they are happy to do hard work for the company because it's such a great place to work.

I hereby offer my recommendation for CEC based upon my recent dealings with the company. I would not hesitate to hire them again for any electrical project.

Sincerely,

A handwritten signature in black ink, appearing to read 'Joey P. Leslie'.
